

Wetlands to be filled to make way for another trans-load station and processing plant in Monroe County. Who will be impacted beyond this location? What is the destination of the silica product? Will a hearing be held? Where? When? and who will comment?

Issue: # 90
Date: July 11, 2016

While I shared this email with a number of people from Jackson County and Monroe County early on, I have had some inquiries to share it with others on my list. The plan is to fill in a large area of wetland (over 25 acres) for a processing plant and a trans-load station at a northern piece of property in Monroe County adjoining Jackson County. Silica would come from a mine in Jackson County. While the issues may be appropriate for Jackson and Monroe Counties, other counties may be affected they the rail and/or expansion.

No doubt the DNR will be handling the hearing if someone has asked for one so DNR personal may have additional details.
