

Subject: DANGEROUS LEVELS OF METHANE CREATED BY SHALE GAS FRACKING SHOULD BE DISCONCERTING TO US ALL!

EXCELLENT VIDEO. BE SURE TO VIEW IT!

*.....keeping watch on
the industry*

Issue: #194
Date: APRIL 14, 2018

I urge You and your family to read this article and then view the video. It is critical that all understand what this scientist is saying about the future of our health and life on this earth!

Dr. Tony Ingraffea is outstanding. The article is entitled: World May Hit 2 Degrees of Warming in 10-15 Years, Thanks to Fracking. A scientist from Cornell University, he has reached the conclusion that leaking methane from the shale gas fracking boom could have disastrous results for all of mankind and the earth if we keep doing what we are doing.....

https://www.desmogblog.com/2018/04/11/climate-change-two-degree-warming-fracking-natural-gas-rush-ingraffea?utm_source=dsb%20newsletter

He suggests each person study and ponder the questions on his final slide and personally answer them.

Frac sand from Wisconsin and the Mid-West really does allow this industry to continue! We must be committed to keeping fossil fuels in the ground!
