

Health issues are a matter of concern!

*.....keeping watch on
the industry*

Issue:#340
Date: August 2, 2020

**Respirable
crystalline silica
dust
particulates -
occur during
blasting events!**

Here is a preliminary study (not yet peer-reviewed) on an apparent relationship
between PM2.5 levels and risk of death from COVID-
19: <https://projects.iq.harvard.edu/covid-pm>.

**Sincerely,
Crispin**

Crispin Pierce, PhD
Professor
Environmental Public Health Program
Hibbard 358, University of Wisconsin-Eau Claire
105 Garfield Ave.
Eau Claire, WI 54702
(715) 836-5589

When you see visible dust rolling off a pile of silica, take a picture. Send it to me and with your permission, I will use it in a Frac Sand Sentinel article. <sunnyday5@charter.net>

Please indicate a location where the picture was taken. Some areas of the state are pretty dry right now so the opportunity for good photos might be available. Some facilities are "idle" so watering is not occurring.

Patricia Popple 715-723-6398 sunnyday5@charter.net

Welcome to the Frac Sand Sentinel, a newsletter highlighting resource links, news media accounts, blog posts, correspondence, observations and opinions gathered regarding local actions on, and impacts of, the developing frac sand mining and processing industries.

The content of this newsletter is for informational purposes only. The editor of the Frac Sand Sentinel does not accept any responsibility or liability for the use or misuse of the content of this newsletter or reliance by any persons on the newsletters contents.

CHECK OUT THE WEBSITE: CCC-WIS.COM and for additional information, [click here](#) for panoramic aerial views of frac sand mines, processing plants, and trans-load facilities. FracTracker.org is also an excellent source of information.
